FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 3	TYPE OF FIRE: Wildland Fire
FIRE NAME: Yarnell Hill	OPERATIONAL PERIOD: Day/night Shift, July 02, 2013
DATE ISSUED: July 1, 2013	TIME ISSUED: 2230
UNIT: Phoenix District, Arizona State Forestry	SIGNED: Stewart Turner, FBAN

INPUTS

WEATHER SUMMARY:

SKY/WEATHER.....PARTLY CLOUDY...THEN BECOMING MOSTLY CLOUDY. A CHANCE OF SHOWERS AND THUNDERSTORMS IN THE AFTERNOON.
MAX TEMPERATURE.....90-93.
MIN HUMIDITY.....15-18 PCT.
WINDS (20 FT).....SOUTHWEST WINDS 5 TO 8 MPH...GUSTS UP TO 20 MPH IN THE AFTERNOON.
LAL.....3.
HAINES INDEX.....3 VERY LOW.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Thunderstorms can cause rapid and extreme changes in fire behavior due to Strong and Gusty winds.

Entire Fuel Profile is extremely dry. Live Fuel moisture is also very low. Live fuel will not present any effective fuel barrier or suppressing effect.

All fuels are very receptive to changes in wind speed or direction.

SPECIFIC:

All Divisions: Fire will continue to back actively through the fuel bed. Alignment with wind will allow for aggressive downslope pushes. As the fire moves down or across slope, terrain alignment may result in extreme upslope runs to the ridge.

Wind continues to be problematic. Outflow winds from thunderstorms can push the fire in any direction with rapid rates of spread and long flame lengths.

When working around structures pay attention to creeping fires that may spread into unburned structures. Mop-up thoroughly and separate the burning fuels from the unburned fuels.

Spotting is occurring but at relatively short range. PIG 90 to 100% day and down to 20% night.

Rate of Spread: 20 to 40 ch/hr day and smoldering and creeping at night.

Flame Lengths: 10 to 25 ft. day and smoldering and creeping at night.

AIR OPERATIONS:

Afternoon thunderstorms and wind gusts may hamper flight activities in the afternoon. No air operations at night.

SAFETY

Gusty winds around thunderstorms may cause erratic fire behavior. Aircraft may not be able to work because of thunderstorm activity. Don't count on aircraft being able to fly to help you out of a bad spot.

SAFETY MESSAGE

7-2-2013

Communications:

Ensure communications are in place and all personnel know frequencies.

Ensure all personnel have received instructions and they are understood.

Ensure all personnel know operational assignments and emergency procedures.

**STAY AWAY FROM STRUCTURES THAT HAVE BURNED!
TREAT ANY DOWN LINES AS IF THEY'RE LIVE!
SOME BURNED STRUCTURES CAN = HAZ MAT SITES!**

NEW CREWS: Insist on a tailgate safety briefing before you start your first shift on this incident!

- Drink plenty of WATER and mix with sport drinks to replace electrolytes in your system. Absolutely **NO** energy drinks as they accelerate the dehydration process.

Common Denominators of Fire Behavior on Tragedy Fires

- Most incidents happen on the smaller fires or on isolated portions of larger fires.
- Most fires are innocent in appearance before unexpected shifts in wind direction and/or speed results in "flare-ups" or "extreme fire behavior." In some cases tragedies occur in the mop-up stages.
- Flare-ups generally occur in deceptively light fuels, such as grass and light brush.
- Fires run uphill surprisingly fast in chimneys, gullies, and on steep slopes.
- Some suppression tools, such as helicopters or air tankers, can adversely affect fire behavior. The blasts of air from low flying helicopters and air tankers have been known to cause flare-ups.
